**Grain Sorghum Hybrids with Some Tolerance to the Sugarcane Aphid**  
**<http://sorghumcheckoff.com/pest-management/>**

Several commercial hybrids are being sold that have shown some degree of tolerance to the sugarcane aphid. In most cases the hybrids have exhibited the ability to withstand higher infestation populations of aphids without affecting yield or the aphids have been shown to increase in number much slower than in susceptible hybrids. Sound, integrated pest management strategies must still be utilized with these hybrids and the application of an insecticide may still be warranted if action thresholds are reached.

The list below has been put together after visiting with seed company representatives and reviewing various university data. Check with your seed company for other hybrids that they may consider as having some degree of tolerance to the sugarcane aphid.

Company/Brand Hybrid*	Maturity	Pioneer 83P17	Med-Full
DEKALB 37-07	Med-Early	Pioneer 83P56	Med-Full
DEKALB Pulsar	Med-Early		
Sorghum Partners SP 7715	Med-Full		
Sorghum Partners SP 78M30	Med-Full		
Sorghum Partners SP 73B12	Med-Full		
Richardson RS260E	Med-Full		
Richardson Sprint W FG	Med-Early		
Richardson Jowar I	Full		
Richardson Swift V.	Early		
Alta AG1201	Early		
Alta AG1301	Med-Early		
Alta AG1203	Med-Early		
Mycogen 627	Med-Early		
Mycogen 1G688	Medium		
B-H Genetics BH 4100	Medium		
B-H Genetics BH 3400 V	Early		
Warner Seed W-844-E	Med-Full		
Warner Seed W-7051	Med-Full		
Golden Acres 3960B	Medium		

\*All of these hybrids may need to be treated with an insecticide if the action threshold is reached.
